Education

Oregon State University – BS in Computer Science

In Progress

Experience

Lead Software Engineer, MemoryShare – Dallas, TX

Feb 2023 – Present

Software Engineer, MemoryShare – Dallas, TX

Feb 2022 – Feb 2023

- Architected and built a real-time collaborative video editor spanning Vue.js frontend and distributed backend services (SignalR, Azure Service Bus), enabling simultaneous multi-user editing of media projects
- Re-architected a distributed video rendering pipeline in C#, reducing end-to-end render time from 20+ minutes to under 2 minutes by redesigning job orchestration and worker scheduling
- Migrated 160,000+ video assets from MP4 delivery to HLS streaming via CDN, eliminating 30+ second buffering during scrubbing and reducing playback support issues by 90%
- Upgraded API and Azure Functions from .NET 6 through .NET 10, resolving breaking changes across nullable reference types, LINQ translation, image processing libraries, and authentication dependencies
- Containerized video rendering service with Docker, eliminating fragile host-dependent installation requirements and reducing environment setup from 2.5 hours to under 5 minutes
- Implemented perceptual image hashing to detect duplicate and near-duplicate media assets at upload time, reducing manual content moderation workload by 50%
- Migrated deployment pipelines from Azure DevOps to GitHub Actions for API and rendering services, consolidating CI/CD tooling within GitHub and eliminating context-switching between platforms for code review and deployment management

Teaching Assistant, PDX Code Guild – Portland, OR

Dec 2021 – Jun 2022

- Selected as Teaching Assistant based on top cohort performance, providing technical mentorship across full-stack JavaScript and Python development
- Mentored 30+ students on Git workflows, API design, and production deployment best practices
- Conducted code reviews, debugging sessions, and architecture guidance across multiple stacks

Projects

Callsign

<https://marketplace.visualstudio.com/items?itemName=ian-davis.callsign>

- Published a VS Code extension to the VS Code Marketplace for exploring and testing OpenAPI specifications, featuring an integrated HTTP client, spec visualization, and JavaScript/TypeScript SDK code generation

Media Toolkit

<https://mediatoolkit.iandavis.dev>

- Built a browser-based HLS debugging toolkit that parses manifests, validates segment sequencing, and diagnoses CDN delivery issues, powered by FFmpeg via WebAssembly for client-side video trimming, thumbnail generation, and format conversion

Forma

<https://forma.iandavis.dev/>

- Built a browser-based 3D roguelite dungeon crawler in Three.js with a custom Entity Component System (ECS) and procedurally generated dungeon layouts

Skills

Languages C#, Java, TypeScript, JavaScript, Python, SQL

Frameworks & Libraries .NET Core, ASP.NET Core, Entity Framework Core, Vue.js, SignalR

Infrastructure & DevOps Docker, GitHub Actions, CI/CD, Linux, Nginx, FFmpeg, AWS (Lambda, SQS, Kinesis), Azure

Databases PostgreSQL, SQL Server, ClickHouse, SQLite, Cosmos NoSQL

Tools & Platforms Git, Mux, REST APIs, WebSockets, HLS/Media Streaming
